- **TESTING OF CONTROL TRANSFORMER**

M/s Indusree, Kolkata-86 was regularly sending the Transformers to Central Power Research Institute, Bangalore. They have approached MSME-Testing Centre Kolkata for testing their control Transformer as per IS 11171. MSME-Testing Centre Kolkata accepted the challenge and our Electrical officers carried out the testing of transformers from 5 KVA to 100 KVA at the unit premises satisfactorily in the first time of the history of MSME-Testing Centre Kolkata.

Our concerted efforts save time & money for the customer. This is indeed a great pleasure & satisfaction to the Team MSME-TC, Kolkata.

- **TESTING OF SOLAR POWERED RADIO:**

Solar Energy is a renewable free source of energy that is sustainable and totally inexhaustible, unlike fossil fuels that are finite. It is also a non-polluting source of energy and it does not emit any greenhouse gases when producing electricity.

MSME-TC, Kolkata has tested a Solar Powered Radio embedded with Solar PV module, first time in Electrical Laboratory. In this test we conducted the performance testing of solar powered radio at sun light by measurement of Open Circuit Voltage (Voc), Maximum Voltage (Vm), Maximum Current

(Im), Short Circuit current (Isc). This test has been conducted for the purpose of a new product development of a Micro Unit, to ensure quality of product. The name of unit is Geetanjali Solar Enterprise, P-14, Kasba Industrial Estate, Phase-I, E. M. Bypass, Kolkata – 700 107.

- Establishment of Export Facilitation Centre for providing Handhold support to MSMEs who desire Exports. The Cell is working in close coordination with DGFT & Different Export facilitation Centre. The Cell was set up in Dec 2019.

The following special activity was carried out during the COVID period:

a) **Testing of LED based Solar Street Light:**

At present the use of Solar PV based lighting products are very popular for domestic, commercial, industrial, street lightning purposes and also in the view of conservation of energy. Using Renewable Energy recourses also helps support the environment by reducing the use of coal and fuel, which also causes pollution. LEDs is the most efficient way of bright light & it reduces the consumption by half of what it used to be earlier. The LED based solar lightings consists of series of LEDs, PV module & battery the PV modules receives heat from sun and converts it to electrical energy which is stored in the battery cell and during night the battery supplies power to the LEDs to provide light. Using of LED based solar lighting can not only reduce the net energy consumption but also relief the environment from exhausting the non-renewable recourses and pollution. The LED based solar street lights are required to be manufactured as per specified by The Ministry of New and Renewable Energy (MNRE) Thus, for the first time Electrical Laboratory of this Testing Centre has conducted **Photometric tests such as Chromaticity Coordinate, Colour temperature, Efficacy, Lumen, Render Index, Electrical Input Power, Voltage, Current etc. on Solar Street Lights as per LM-79-2008 and has successfully completed the tests.**

b) **TESTING OF LED STREET LIGHT**

Now a days the use of LED are very popular due to Lighting plays a pivotal role in ensuring proper visibility and the safety of the residents & in addition, the CO2 emission is lower as compared to conventional lighting sources, hence promoting a greener and better tomorrow. An LED street light is an integrated light that uses light emitting diodes (LED) as its light source. These are considered integrated lights because, in most cases, the luminaire and the fixture are not separate parts. In manufacturing, the LED light cluster is sealed on a panel and then assembled to the LED panel with a heat sink to become an integrated lighting fixture. LED street lighting is an long-lasting and a cost-effective choice for illuminating the street as per requirements, LED street lighting is energy efficiency compared to conventional street lighting fixture technologies such as high pressure sodium (HPS) and metal halide (MH). There are many advantages of using LED street lights like Low energy consumption, Long and predictable lifetime, Quick turn on and off , Higher light output even at low temperatures and even LED street lights have Reduced glare which is helpful for the human eyes . Thus, for the first time Electrical Laboratory of MSME-Testing Centre has conducted Photometric tests such as Chromaticity Coordinate , Colour temperature, Efficacy, Lumen, Render Index, Electrical Input Power, Voltage, Current etc. on LED Street Lights as per LM-79-2008 and has successfully completed the tests.

Success Story:**SUCCESS STORY****Product Name: Fuel Saver Equipment for LPG**

M/s. Futuristic Gas Systems Pvt. Ltd., 303, Powai Plaza, Central Avenue, Hiranandani Gardens, Powai, Mumbai – 400076 contacted this centre for testing of Fuel Saving Capacity of Fuel Saver Equipment which was developed by them for saving of precious LPG for household purposes. Initially, they were not clear how the parameters for fuel saving capacity should be determined. In consultation with our Director Shri Vijay Kumar & concerned testing officers, a technical data specification (TDS) was designed to ascertain the fuel saving capacity of the Fuel Saver equipment.

Accordingly, testing was carried out in two stages on two full LPG cylinders i.e. one without Fuel Saver Equipment & another with Fuel Saver Equipment attached to LPG Stove with 20 ltrs. of water filled in two containers & water heated to 90°C on continuous basis for 5 hrs per day till both the cylinders were empty. Gas Flow setting was maintained at 28mB throughout the test. Test was carried out for almost 16 days. LPG gas consumed & time consumed were recorded for each stage.

A Total Gas Saving of 15.35% was observed after the testing which considerably excellent amount of LPG is saving.

Considering the present situation of ever increasing demand for LPG Gas & gap between supply & demand, this Fuel saving equipment with a gas saving of 15.35% will definitely help LPG consumers to effectively utilize the LPG gas to the best and also open up huge potential for this product.

Product Name: Prosthetic Foot(Artificial Foot)

One of the final year student of All India Institute of Physical Medicine and Rehabilitation, Haji Ali Park, Mahalaxmi, Mumbai -400034 Ms. Gargi Khare, who is conducting her dissertation on “Development of a Universal Prosthetic Foot” contacted this centre for conducting Mechanical Testing i.e. Cyclic Test for 5000 cycles of the prosthetic foot being developed as a part of her project work. This prosthetic foot is going to be used for disabled persons only. Accordingly, testing was carried out by applying the load on the forefoot area (toes area) where maximum load is exerted while walking. The test was carried out for 5000 cycles successfully. After the test, foot was checked for any crack or failure. There was no crack or any type of failure observed after the test.

- » Considering the noble motive behind the development of prosthetic foot, Ms. Gargi Khare was exempted from paying test charges.

Safe Fan Rod/Pipe that Prevents Suicide Attempt from Hanging from Ceiling Fan

M/S Safe Solutions Industries, Bhandup, Mumbai, contacted this centre for testing their patented product 'Safe Fan Pipe' that can be used in place of an ordinary pipe (down rod) for hanging ceiling fan. The use of this unique pipe would save any attempt to hang from fan, as the pipe will open from its central joint if load on Fan exceeds 20Kgf and expands with help of spring fitted in the pipe, and thus, a person trying to hang from fan will get deposited on the ground safely.

As this Safe Fan Rod was invented and developed for the first time in the country, with view to get acceptance amongst customers, Safe Soln. Ind. Had approached us and had a couple of meetings with Dy. Directors, Mr. T R Sharma & Mr. Manoj Vats as well as Asst. Director Mr. A G Telang to understand how to go about testing. After deliberations, a Technical Data Specification (TDS) was prepared for testing rod for using it for hanging ceiling fan.

Four Tests were done: 1. **Operational Test**; to test that the fan runs on the Safe Fan Rod fine and there is variation in length of rod and no breakdown or undue vibrations during running for specified time period. 2. **Safety Factor Test** to ensure that if the load equal to 3 times the normal fan weight is applied, the joint of rod would remain intact i.e. there will be no variation in length of rod after load application for two hours. 3. **Axial Sudden Pull/Impact Test** to ensure that if load on the fan exceeds 22kgf to 23Kgf then rod opens from centre and the spring in it expands to over 900 mm. 4. **Environmental Test (Corrosion Resistance Test)** finally, to ensure that Safe Fan Rod does not get deteriorated in humid or sea face condition, and run the fan in different environment, salt bath test for 96 hrs was done. All the tests were successfully conducted & rod sample passed all the tests as per TDS.

The proprietor was very much satisfied with the support from the test team and management, as the lab created facilities for carrying out these tests, which were new for the MSME TC, Mumbai.

As informed by the proprietor, as per National Crime Record Bureau (NCRB), there are 1.3 Lacs suicides taking place in India. Of this, 60% are taking place by means of hanging. Most of them are by hanging from **ceiling fan**. In view of this, the Safe Fan Rod, felt to be the need of an hour. Keeping in view this point, the tests were carried out for this innovative & potential life saving product to see it gets recognition due to tests done at **MSME TC, Mumbai** to get confident amongst end users of this **Safe Fan Rod** for saving lives.

PRODUCT NAME : ARTIMASTER

One of the entrepreneur M/s. Intgeni Energy Solutions Pvt. Ltd.,Sewri (West), Mumbai – 400 015 manufacturing of Energy Efficient equipment & accessories was approached this Centre for testing of ARTMASTER an energy saving equipment for Split type Air Conditioner.

It was a unique product with no specified procedure for conducting the test. With the consultation of manufacturer a technical specification for the testing was prepared and job was accepted.

Performance test was conducted with 1.5 Ton split AC installed in draught free room and operated for 8 hours without and with using of Artimaster. Measured the various parameters like KWH, Compressor Current, Evaporation in & out temperature, Condenser in & out temperature, Room temperature at various points, Suction pressure etc. in both the cases i.e. with and without Artimaster.

After the installation of Artimaster,

- * Discharge pressure drops due to increase in condensing area,
- * The refrigerant gets additionally cooled,
- * The T at evaporator increases. More heat is absorbed at the evaporator.
- * The additional heat is rejected at the condenser, making T at condenser to increase.

Room set point is attained quickly making the compressor to cut off quickly or makes compressor to reduce the load.

Less energy is needed to run the compressor.

Less current drawn by the compressor while running also reduces the energy consumption.
